PROFESSIONAL SUMMARY

Pre-final-year Cyber Security and Digital Forensics student at Vellore Institute of Technology with hands-on experience in vulnerability assessment, network security, and data-driven analysis. Certified Ethical Hacker (CEH v13) with strong skills in SQL, log analysis, and system monitoring. Skilled in analyzing application architectures, identifying vulnerabilities, and leveraging data insights to improve system performance, security, and operational efficiency. Interested in Cybersecurity, IT Operations, and Data & Application systems.

EDUCATION

Vellore Institute of Technology

• Integrated Mtech [Specialization in Cyber Security]

Expected Graduation: 2027

CGPA: 8.63 / 10

TECHNICAL SKILLS

- **Security & IT Domains:** Web & API VAPT, OWASP Top 10, Network Security, Security Architecture, Distributed & Cloud Systems, Vulnerability Assessment, Penetration Testing, System Monitoring, Log Analysis, Digital Forensics.
- **Data & Analysis:** SQL (Joins, Queries), Data Analysis, Log Analysis, Excel (Pivot Tables, VLOOKUP, IF), Basic Statistical Analysis
- **Tools & Platforms:** Microsoft Sentinel, Splunk, Selenium, Burp Suite, Owasp ZAP, Nessus, SQLMap, MySQL, Microsoft Excel, Wireshark, Postman, AWS, Docker, Linux
- **Programming:** Python, Bash, SQL, HTML, CSS.

CERTIFICATIONS

- **Certified Ethical Hacker (CEH v13 – AI) — EC-Council**

Jan 2026

EXPERIENCE

63 SATS Cybertech - VAPT Intern

Oct – Dec 2025

- Performed architectural security analysis for web and mobile applications, evaluating authentication flows, API interactions, and cross-system and operational data movement to identify systemic design and logic gaps
- Identified 20+ critical vulnerabilities (SQLi, XSS, CSRF, IDOR), mapping exploitability to implementation flaws and underlying architectural weaknesses
- Assessed access control models and network configurations, analyzing security gaps and delivering actionable remediation insights to improve system reliability and security posture
- **Tools Used:** Burp Suite, Nessus, Postman, SQLMap

PROJECTS

SOAR Platform (Security Orchestration, Automation, and Response)

Jun – Aug 2025

- Designed a cloud-aligned distributed security architecture integrating endpoint telemetry, detection logic, and automated response workflows
- Built API-driven incident response pipelines enabling real-time threat detection, endpoint isolation, and reduced manual intervention
- Evaluated system data flow and implemented automation using LimaCharlie and Tines to improve response efficiency and operational consistency
- **Tools Used:** LimaCharlie, Tines, Slack, Python

Centralized SQL Injection & Data Exfiltration Platform

Oct – Dec 2025

- Engineered a centralized platform to simulate SQL injection attacks and analyze web applications for data exposure risks and patterns
- Developed automated workflows using multiple SQL injection techniques (error-based, union-based, blind) to validate vulnerabilities
- Optimized SQLMap-driven pipelines, reducing manual effort by 30% while analyzing query behavior and data handling weaknesses
- **Tools Used:** PHP, Bash, Kali
